

ABSTRACT OF THE DISCLOSURE

A display data creating apparatus is disclosed that creates display data representing multiple  
5 display sections. Each of the display sections contains a prescribed type of information, created in response to a request from a client terminal supplied via a network. The apparatus transmits the display data to the client apparatus via the network. The  
10 apparatus comprises a determination part that determines for at least one of the display sections whether the information to be contained in a current display section satisfies a prescribed condition. A display data creating part updates the current  
15 display section in accordance with the determination result to create the display data.
